Jeffrey

I have read your remarks about =he project.

First of all I would like to specify that I fully assume the paternity of the study. No project came out of my agency without my approval. I assume all the errors, the main one being that I first study the implementation of the blocks and not details and I beg you to accept my apologies. This is not professional on my part.

I just would like to give you s=me explanation about my misunderstanding. I am happy to have a ca=l on thurs or friday.

1-The access indicated as Priva= entrance was for me a secondary access. I wanted to make a main access to +15.50. The visit of the house had to understand by this level and=20 the further we go in the house the more we are privative (knowing that we are in a semi-private villa)

Your note for the view of St John and the windy space is perfectly justified but because of the double use of access this parameter seemed acceptable to me. I take note of that. Regarding the toilet again we have not done a detailed job and this is not correct on our part I thought that these minor aspects would be studied in the following phases. We are in a very preliminary phase.

1 the service entrrance is right off the dock♦=A0 the first think anyone sees? if i want to go to my ro=m , it is silly to walk through the entire house. . . it=shares a very steep road with servie 4 meters away. ♦=A0 the angle s views are ALL WRONG except for the pool.=C2♦ not sure how this happened again. especailly given the curren= layout , dictates the best views. and they are NE . North is =lready bad and yours are worse. my bath faces GSJ♦=A0 , and not the bvi. . it is low ugly and is intersected by the cor=er of the library.

2- The cinema we know perfectly=20 well the noise nuisance of a cinema for that it is enough to make a double sealed box and to create SAS, the technical aspect in projection or retro-projection too. For the number of places the plan was more indicative. None of this was detailed and I understand your wrath. On the other hand the height was taken into account since we had planned a lateral ramp which allowed us to gain the height not necessary.\

The cinema makes zero sense there are doors that open to light. doors that open to noise there is a sitting room above. pipes air con , are silly, . . toilets opening directly into the movie-area??! with both light and sound. twice as many seats =s requested 3 times.

3-The 2 toilets noted, but for = pool area, hall, sitting, pool area, loggia terrace of 1500m²=A6. it does not seem extravagant to have 2 restrooms.

1 the toilets are next to one another in my home. =C2= no guests . and they open on to the sitting area directly , awful. i dont want to see someone come out of the toilet. .

4-The toilet of the room we spoke more implantation than operation. The big window totally agrees like we did not study the facades, this point would have been studied with the architectural composition.

I do not open my window in the bedroom but need to in a desk room

5-this point has to be clarified because I did not understand. the view of her rooms are ugly ugly ugly , on a great island - again the angles are all wrong AGAIN.=C2= making designing on the computer misleading.

6-The dimensions of the dressing room and the absence of light I have no comments

7-the stairs of the office to=20 your room exposed to the wind. I agree with you it's exactly the same=20 distance between your current room and the office but now you're protected, we have not developed enough.

the angles maintenance. wind. rain sun. all silly .

8-Service access to the entrance= this point has been added to explain the maintenance of the terraces.

And I think the terrace gardens=20 are not a good concept on our part. Indeed if you want to have a heavy maintenance this concept is not suitable, it requires light engin. And this problem will be similar with the patios.

if there are to be trees. bushes =A0 how do they get there , except by machine.? =A0

9-The number of elevator seems=20 to me consistent it was to reduce the flow (1 semi private elevator, 1 private elevator, 1 service elevator) for a villa of 2000m² this is nothing extravagant.

=b>I am always happy with extravagance, there is no consi=tant electric power , asking for people getting stuck in=an elevator on an island. . super silly.

=/p>
