Subject: Fwd: LSJ Fibre

Good afternoon

Attached report from AVL=BVI regarding LSJ & GSJ network issues.

I anticipate receivin= proposal for RO to Sea water intake Fiber run Monday The proposa= will based be on AVL supply the fiber and equipment <=div> LSJ lay the conduit etc AVL terminate, install and=tidy up existing network

Can we forward existing n=twork map etc to Rusty so he can proceed with proposal for Fiber and Wirele=s networks ?

Please advise

Brice

Subject: LSJ Fibre

Hi Brice,

A quick summary and follow up b=sed on my visit to LSJ the other day.

<=div>

General overview (simplifie=):

I see an opportunity to simplify the data n=twork and make it more reliable. This can be achieved by focussing on three=main areas:

1. Fibre Optics
2. Wireless Technology
3. Cabinet=management

1 - Fibre Optics

The current fibre=network comprises a mix of different types of fibre. I recommend using Sing=e Mode fibre everywhere. This is the one standard that can be used most (I d=re say all) systems and is not limited by distance.

2 - Wireless technolog=

There is currently a mix of Ruckus and Ubiquiti systems. I recommend using Ruckus everywhere for uniformity, control and management. It is also easier to support.

3 - Cabinet management

These can be tidied up and managed to make it simpler to troubleshoot and support. It will also provide additional protection and reliability for the components and cabling. The External cabinet by the tower also needs to be mounted properly with thermal conditioning (AC).

<=r class="">

The above can be applied as Projects recommended below:

RO Fibre Optic link

This is urgent. I will create a proposal to supply the cable and terminate. The most efficient thing for us all is for us to supply you with the best cable and you arrange for guys to pull it in and we will terminate and power test. We can then work with Dean to confirm the link is up.

Fibre Optic Network

<=iv class="">To set up the island for the next 30-50 years, all buildings should be interconnected with OSP Single Mode Fibre. It would be best to start with a map of the island and I can mark it up. Again, if you can coordinate getting the fibre pulled in, I can arrange to terminate and test the fibre in each rack.

I will send a proposal a few days after I have received the map.

WiFi system

The island has the core hardware already and some experience with Ruckus. It is quite a simple project to put everything on the Ruckus platform. I just need to know from Jermaine how many WAPs there are on both islands and what model and type they are. If he can send me a network schematic, that would be very useful. He said he had one.

I can send a proposal on receipt of information.

<=iv class="">Cabinet Management

<=iv class="">After the fibre is installed and terminated, we can take apart the old fibre cabinets and tidy everything up. There's not much

And also, FYI...

AV

Although not part of the scope, I thought you might like to know that we are the regional reps for Bose K-Arra= QSC <<https://www.qsc.com>> & SONOS <<https://www.sonos.com>> McIntosh and Sonance I can see the client likes audio and I just thought you might like to know that we can get very creative in designed high quality and powerful systems that are discrete=

For video and control, we are the regional Dealer for Crestron <<https://www.crestron.com>> . This is useful if you have too many remote controls and the system is hard to use.

Lutron

For lighting, I noticed the property is controlled with traditional switches. If there is an interest, we can help control and dim the lights to create appropriate scenes for each zone using Lutron <<http://www.lutron.com/en-US/Products/Pages/WholeHomeSystems/Homeworksqs/Overview.aspx>> or Crestron.

I hope this is useful,

let me know if you want me to expand on anything at this stage. I am aware the clock is ticking.

best wishes

Rusty Henderson
