Greetings John,

Following up on the discussion regarding changes for the Mechanical/RO building roof and Engineering area projects, the proposal is to change the buildings from re-fabricated sheathing to concrete block, retaining the steel framework.<div>

It has also been proposed to eliminate the pre-fabricated building altogether for concrete and concrete block.

=div>

Please let me know if this is your understanding of discussions you have had recently with Brice, and what Mr. Epstein requested yesterday.=div>

I will look out for your email of the original drawing and proposals on Monday.

Have a great weekend, Daphne

Greetings Sir,

=div>I just spoke with John. He will forward the original design drawings by Monday. He will also prepare a proposal for the changes - mechanical, electrical and structural wall - that Brice requested.

<=r>

John stated further that the structural steel design still needs to be done. The original design is based upon a pre-engineered steel structure.

Respectfully,

<=iv>Daphne
