Good day all , Just wanted to give an update on the status of =he pool.

The plaster work went very well , however in =he acid wash and power washing of the pool in preparation of putting =he Kristacure (sealer) we felt that the pool would benefit from being =illed with water first for a few weeks .(This is the normal start up =rocedure) During this time have Smiley brush it daily or as often as =e's able , to even up the surface a little better so when it's =ealed the pool looks the best it can.

The Blue and other colored plasters are very difficult to get =he finish uniform and I'm confident this additional step before sealing =ill do the trick.

It is important that the PH stay at or close to 7.0 for =0 days .(this is done with the addition of Muratic acid) Additionally =hlorine can be added on Friday . No calcium is to be used. The salt =ystem should not be used during this time as well.

After this period the pool can then be drained and sealed as =lanned.

Please =all me or email if you have any questions.

Thank you

Rick Rossi
