Subject: Barge Ramp

Mr Epstein,

Dupson is finished with the=dock apron and I wanted to confirm we will have him move onto the barge ra=p next.

He will need to collect stone= over the next few days for the ramp. The design to confirm is to ma=ch the dock apron visually. Do you want any boarders like on the dock apro=?

The process will be as follows;

<=div>
-Collect stones
-Jack-Hammer up stones (2" removed=from surface) -Stone Facade- this will be set on top of rough su=face, we will be using a bonding agent (most likely Intralock) to bond the=new cement to the set concrete to add more compression strength for the li=e loads coming off the barge

We can do a sm=ll section first if you would like. Please let me know what you thin=. Thank you!!

Very Respectfully,
=br>
Kyle Reavis
