Dear Harvard Friends,

I'm delighted to announce that my book on the history of life-concepts is now out. After 5 years of work, I'm pleased with the result. Life Concepts from Aristotle to Darwin: On Vegetable Souls traces the history of theories of life in Western thought. I think it will be valuable for understanding how we got where we are with the "definition" of life, but also with regard to the value of life and the place of life within the larger universe. I hope you'll take a look.
