Good morning, Sir,

Ghislaine=from Kitchen solutions brought three samples of white quartz countertops. = took two photos of each sample - one against the countertops Kenny instal=ed, and one against the cabinets.

Option 1: Actua=ly matches Kenny's countertop almost exactly, but it is the least whit= of the three. I think it looks kind of dirty next to the cabinet.

O=tion 2: This one was lighter than Kenny's tops. It seemed the closest =o matching/coordinating the white cabinets.

=div>Option 3: This is two identical samples side-by-side to give you a lar=er image. It is the most white and will stand out slightly from the cabine=s.

In order to provide an estimate, she needs to know:

1. The color/brand selection. I think you would prefer #2.</=iv>
2. The thickness. Quartz comes in a 1 3/16&q=ot; option and will be seamless. To get 1 1/2" (or any depth desired)=the edges will be mitered. Would you still prefer 1 1/2" or go with 1=3/16"?
3. The finish. Since the=cabinets have a gloss to them, I think you would prefer the polish finish.=/div>

For the outdoor tiki kitchen she recommends = natural stone such as quartzite/granite and will send photos of samples.<=div>

Do you want to proceed with 1 1/2" for =he thickness so she can write up the estimate?
