Barry,

The antenna for the KA-Band goes on the top of the tail cone and will not impact the registration paint change we discussed today.

The do run some wiring through the tail area but there is no major impact in terms of paint.

Best Regards,

Lee

We haven't talked about implementing the Internet upgrade yet. Does that have any impact on painting? In other words, will they have to mount something on the tail in the future that will require repainting?
