Subject: Re:

perhaps its not the important dimension? If som= share advantages of luck and otherse dont, the curve flattens, or becomes=bimodal. one can imagine the fomation of "lucky enclaves" where =uck is actually manufactured in a sense, and effects kept inthe group and =urther amplified. In a way, it is a kind of "market" to capture =nusual events or to create cascades of events that would be otherwise diff=cult to create, anticipate, or predict?. I was at lunch yesterday with Dan=Rose and he was saying that all of the major real estate families in NYC (=xcepting Trump) collectively think of the longer-term consequences of thei= actions for the larger group of dynasties.

How do thes= "intentinal" actions affect the natrual probability distributio=s? Perhaps not at all (!!!) but they might shift the curve or displace oth=rs at different places in the aggregate population (the curve). Lets keeep=thinking.

BTW, this also has implication for my life (a=d yours)- we want to be members of various "lucky groups" (physi=al, mental, emotional, intellectual, etc), and if we pick the right sub-gr=up, there will be natural regression to the mean in that group.... so, sur=ound yourself with people as gifted or more, and use the power of RTM? Som=times, it only works if the gaps are not too large, but I have found it a =ery useful heuristic in life.... in lots of areas.

When =re you back?
