"Darwin once observed, his first explanations of things frequently proved wrong. The originality and breakthrough would come with thinking up the next explanation."

Would've Loved to meet him<=span>

BG putting lots of pressure to figure out biomarkers FYI

I know=not appealing to you but I have some ideas both on the science specifically=but also on the process(es) he could use

He also does not believe that there are ppl or orgs looking to put= money anywhere -

I tried to tell him that the poverty/development stuff is not an appealing place to put money or a great fundraising idea but that other realistic and "related" ideas could really be great but he disagrees =br> More tomorrow

<=div>

Btw Why do mitochondria migrate? That is so weird.
