Google earth is the best way to measure the only other way is by survey which we would have to have it surveyed by Bateman. Which we will do when its laid as part of the as laid survey, but this is a very good estimate.

how was route measured? google =aps?
what are other ways to measure?
please advise
thanks

There are two lines here, we can get it down =o 9200, but it will require more difficult maneuvering. 9300 will =llow an easier swing out. The numbers are shoreline to =horeline.
