'The Science of Consciousness' (=E2♦♦TSC') is the world's largest and longest-running i=terdisciplinary conference on all aspects of the nature of conscious experience, awareness, feelings and existence. Questions include=how the brain produces consciousness, whether consciousness is intrin=ic to the universe, or an epiphenomenal illusion, how consciousness can ca=sally affect brain processes, what are the best empirical theories, do we have free will, how did life and consciousness o=iginate and evolve, what are the origins of moral and aesthetic values, ho= can we improve mental, physical and cognitive function, and can♦=A0consciousness persist after bodily death, e.g. through 'uploading' to machines, or via mental proces=es tied to the natural world? These and other relevant questions are appro=ched through many disciplines in science, philosophy, culture and contempl=ative practices.

'TSC' began at the University of Arizona in Tucson in 1994, and returns there in even-numbered years, alternating with TSC conferences around the globe (Italy, Denmark, Japan, Hungary, Hong Kong, Sweden, India, Czech Republic, Finland). The 2017 conference was scheduled in Shanghai, China, June 5-10, but due to unforeseen circumstances is moving to San Diego, specifically The Hyatt Regency La Jolla at Aventine, near the UCSD campus.

The TSC 2017 conference will consist of Plenary Sessions, Pre-Plenary Workshops, Evening Concurrent Talk and Poster sessions, Technology and Art Exhibits, Social Events, Entertainment and Satellite Excursions.

The Plenary program is nearly complete (see below), and Concurrent sessions are also nearly filled. Abstract submission for talks and posters will now reopen until April 20. Send abstract of 500 words or less to [REDACTED]
