Yes, I agree that the spacetime universe is a human construct. It is not the fundamental reality.

Physicists are now recognizing this. They say, "Spacetime is doomed," meaning it is not the fundamental reality that they had hoped it would be. They don't know what is the fundamental reality, and are searching for it. But they don't want to take seriously the idea that consciousness might be the fundamental reality. I saw this first hand when I participated in the FQXi conference in Banff last summer, where physicists and cosmologists met to grapple with the fundamental nature of reality. Chalmers was there too, and spoke about consciousness.

Agree

Thanks

However the space time universe is a human construct - linguistically speaking - language used by humans to describe knowing and experience / perceptions in awareness ?

Dear Deepak,

Yes, I would say that the sensory apparatus and brain are species-specific icons. My entire body is just an icon. When I move my hand and grab something, even that movement is just an icon. I don't know what I am really doing in objective reality—I only know my own actions under the limits of the descriptions available within my interface. Genes, animals, species, and even spacetime itself are just icons. <=span>

The evolutionary arguments against true=C2♦perceptions do not hold against true logic and math, since we do=need to reason about fitness payoffs—two bites of an apple give roughly twice the payoff as one bite, for instance. There are no selection pressures to be geniuses at math and logic, and few of us are. But we need to have enough competence to get the =ayoffs we need.

I wouldn't say that the spacetime universe is itself a conscious agent, but that it is the =format of the interface of human conscious agents.

I am working on a mathematical theory=C2♦of how conscious agents evolve languages to better understand each other. It seems that they can get more information about each other without violating the second law of thermodynamics, if they hillclimb mutual information. Fun research=ahead on this one!

Love,
Don

Dear Don

Would you say that the sensory apparatus and brain - eyes ears other s=nses are species specific icons (symbols) for modes of knowing and exper=ence - seeing hearing thinking feeling imagining etc

Also it seems to me that humans by giving names to modes of knowing an=experience (perception) have created the universe as a human construct = Everything from a quark to a boson to a galaxy is a name or description b=stowed by humans to a mode of knowing or experience in awareness . This holds true for what we c=ll a body mind genes other animals and species

Taxonomy is symbol making for knowing and experience .

Do we know anything about the origin of symbolic language including ma=hematics ?

What does evolution say ? The entire universe is our construct - a spe=ies of consciousness - what you call a conscious agent

Love

Deepak Chopra MD
