Subject: TSG / Patrick

thank you

yesterday danny, smiley, anna, brice, patrick and i all spoke =rom 3-4:30pm. today we will be speaking with bob peterson at =pm.

patrick =ho installed RO dominated the call and outlined 3 major issues for RO =ot functioning: membranes, pretreatment and post treatment =ot functioning. danny was lost most of the call agreed with =atrick's logic and approach. Danny only objected to replacing =alves vs Pump. i called danny after we all spoke to see if he =isagreed with anything else and he had nothing to say other than =atrick knows this stuff well and i am still learning. after the =all i had very little confidence in smiley and danny running the RO =lant without guidance from patrick or initiating a service contract =ith TSG in some form or fashion..

patrick thought adding a water softener =o master bedroom was silly as problems are from post treatment.
=nbsp;patrick questions why we would want to put salt back into water =ith a water softener.

overview of patrick =olutions:

1)membrane - correct backwashing procedure as foreign objects =nd debris are clogging up membranes 2)pre =reatment - daily testing and logging will allow us to be in tune to =evels which would quickly identify if something was off 3)post treatment - seawater is ionically imbalanced as it is =n open sea water intake and we need PH which has been as high as 7.6 =7.8 to be brought down to 5.5. patrick also said that adding calcium =arbonate before PH was reduced to 5.5 was not helpful.
4)water samples - take 3 samples: ro system, post =reatment sample and master bedroom 5)tony bell - =ormer TSG programmer - coordinate with him regarding PLC and =eprogram 6)quarterly service
