Hi Kathy,

I can work around that for a =ouple of days. I realize the choice of available tv options is off the =harts. Building a niche for a tv, automatically restricts you to future =ize upgrades. However, one dimension that (in your exhaustive search) =hould be dialed in ,is the thickness. Currently, readily available =evisions are available in a LED,LCD, and Plasma format. I'm no techie, =.e. I deal with the application of math, chemistry, physics, history, =nd reading comprehension, on a daily basis. Semi-conductors are outside =f my knowledge base. Once all those little bytes have been neatly =ackaged, game on.

See if you can narrow your =earch to present me with the overall thickness of the television. Gabby =as specified that the existing wall will be padded approximately 2", =nd many LED type televisions fall within that dimension. If, however, =ou opt to go with a thicker tv, we may need to forego the articulating =rm, and simply bolt the thing to the wall (So that it doesn't project =eyond wall plane)

Sorry for the long-winded =xplanation, but I thought it wise to give you some =arameters.

Thanks,

Jim

Hi Kathy,

Thanks for the follow up on the ceiling. I pushed the framing crew back one day  
(They will start on Tuesday)

In preparation for the framing, I noticed that there will be a niche for the television. Ideally, the tv could be mounted to an articulating arm, so it can be set flush with the wall surface, when not in use. The dimensions of the niche, would be determined by the tv. Were you planning on using the tv that you already have? If so, where is it currently located? If not, did you have a particular model in mind?

Thanks again,

Jim
