**Subject:** Re: for your reading pleasure.. though maybe not

I was in antarctica. The west antarctic ice sheet is melting at an unprecedented rate.. if it all goes into the ocean, sea levels will rise by about a meter. You are correct that we should ask if it can be reduced.. We are currently involved in a proposal that explores capturing CO2 from the atmosphere.. That may cost about 100/ton CO2.. if there was a carbon tax, that might be doable. It is not clear yet, but total research on this so far <10 =illion. Total research each year on oil and gas exploration >2 =illion.

is the south pole getting older and more ice ? is it accurate to say that climate changes can only be measured over long periods. 20 years or more. I m here with the trump people in palm and when asked i say i dont have any idea if this global warming is a threat that can be reduced , currently , carbon taking machines. i guess if that is really a concern. i would also like to know what groups refer warming. canada?

yes, freeman dyson says that too.. That may be true at some level, and indeed during a period of the earth's history when there was more CO2 (hundreds of millions of years ago), there were very large plants of certain types... but what does this imply, really? more corn in the arctic? do we need more corn in the arctic? He has cherry picked data, the typical act of those who believe the answer before they ask the question.

My goodness. So you are listening to an old Nobel laureate whose expertise has nothing to do with this, who has never studied this in detail, built models, done experiments....
