Eric,

The available power from the existing converter (110 60hz) was determined by reverse engineering the existing unit from the info (manual) provided by Erik that was with the aircraft.

So in short, the unit power was determined by Jim and he simply subtracted the power that would be used by the microwave and the outlets with leaving the legal overage he determined that this unit was maxed out.

You have to realize that each outlet must be equated using its maximum allowed power.

So the determination is based on the microwave operating with every outlet getting used at the same time.

I hope this helps

Subject: 115VAC 60 inverter

Good morning, would you happen to have the spec's or manual on the 60hz inverter? P/N 4A1000-1HC

When I web search the P/N it list all the places I could buy one but no spec sheets.

I need to find out what the max. continuous load is for this inverter.

Thanks for your help and have a great day,
