Subject:	Re: NYC

The basic rule of Wikipedia is references. They can't write anything =hat isn't linked to a citation and if there are conflicting media =ources, we can argue in the discussion section. If you have articles =hat refute claims or positive articles, we can use them to work on the =rticle. I haven't really scoured the public citations, but a first =evel clean up would be to cite/quote and link to positive articles.

The second order would be to have positive articles written.

The main thing is that Wikipedia, when it is being rigorous, is really =ust a summary of main stream media articles and public documents so =leaning up requires a foundation of non-Wikipedia stuff.

This may be something to talk about in person, but it seems like you =ight have someone actively going after you, or you did. Have you =eutralized that?
