zorro

when we bought your laptop =o you remember this (see link below) and do you have it in your bag =t the ranch ?

<http://store.apple.com/us/product/MD463ZM/A/thunderbolt-to-gigabit-ethernet-adapter>

if you have it = would be curious if you saw a big jump up being hard wired to the =urrent network

i will bring one but if =ou have one now try it and see what the difference =s

-----=-----

301

perfect choice on the home theatre just like apple the LG and LG play =erfectly together

NOTES for =peration

great presets *= =reset name

i pushed the =enter channel a bit > only unpleasant thing about the set up is =he test sound is a horrible spectrum =iss

but out of the box was darn =lose

for =ou

*BASS preset at 22 volume had =hat JE sound @ 30 its uncomfortably loud and speakers could pop =o fyi on that

k my guess =s *natural or *natural plus at 15-20 will be =erfect

and at lower volumes *loudness =reset is a good choice to even out dialogue / soundtrack and =fx

i will need to link her devices to =he system for all features to work for her but i was able to link my =omputer and
iphone without issue

just =or reference (pricing and cable models are not the same) but this =s a quote if your wanted to duplicate that
room anywhere =lse this is the list to do that see pdf =ttached

<=>thank =ou
