Subject: Fwd: Proposal for Jeffery
Attachments: JEpstein.pdf; Untitled attachment 00731.htm

this is the email i just got from the geek squad =..... any issues let me know

Daren thought =t best to let the old system ride so I am doing my best to run both new =nd old networks at the same time

wishing =ou all the best and hope we can speak soon but only when it is good for =ou

take care we all miss you and you =ave my unwavering confidence and loyalty =ir

best

Scott =enett

Subject: Proposal for =effery

Hello Scott,

I have finished up the proposal in a fairly =asic form. You can find it attached.

Unfortunately there are still quite a few =arts of this up in the air. I have tried to address these in the item =escriptions. The items that require longer notes will require Jeffery =o reference the e-mail below.

I would still very much like to setup an =ppointment to come by, but I am rather booked for the rest of the week. =lease let me know if there is a time it would be convenient for you =uys and I will see what I can do.

Talk to you =oon,
Mike

Jeffery,

Attached you will find a proposal which I =repared for the basics of your system. Unfortunately Scott and I were =nable to meet up today to finalize some details, so there is still a =it of uncertainty regarding some items. I have made note of this =irectly in the proposal where possible. Some are marked in such a way =hat you should reference the notes I have included =elow.

1. Denon Receiver: This =eceiver is going to take care of our HDMI video switching and audio =processing. I mostly include this note so that I can mention the Marantz =re-amp we offer. The advantage to the pre-amp is that we can use direct =LR connections, which are generally higher quality than the RCA-XLR =apters we have to use with the Denon. The other advantage is that the =arantz does almost everything the Denon does for less money and with =ower distortion from other built-in components. The only things you are =issing from the Denon would be more than covered by a Sonos and the =appleTV.

A quick note on the =ounting of the projector. I was unable to find a model number or =anufacturer when I visited, so I do not know what parts or labor will =e required in the end. Scott is working on getting this information for =e.

3.4.
