1) DRAWING ON YOUR BUILDINGS:

There are a couple of other things that would be min= blowing. You missed it at Gadgetoff a few years ago, but we have friends =ho have made this astonishing system that lets you PROJECT on huge structu=es "graffiti" ... so you can on MASSIVE walls... use a portable projection system they've developed=; and then with a laser pen (like the ones we discussed) DRAW on the=wall... and the camera attached to the projector attached to some cool=software... recreates the light graffiti... and then lets it smear down the wall if you want that, etc.

The guy who did this is James Powderly and Evan Roth=#8230; [<http://www.gadgetoff.com/2007/video-powderly.html>](http://www.gadgetoff.com/2007/video-powderly.html)

They do very cool stuff.

2) FIRE WRITING: Another friend of mine Neal Ormond developed a system that uses propane and 500 mini gas je= and a computer program to "write" and draw using tiny flame =ets.

This is an amazing installation... and th=ugh he sold the rights to it to a rock group... I think that it would =e an amazing interactive art piece for you.

[<http://www.youtube.com/watch?v=nETmWx5rnrM>](http://www.youtube.com/watch?v=nETmWx5rnrM)

I have about a hundred more ways to enjoyably spend =our money in the pursuit of fun tech.

For the Google IO event I'm producing I have f=und some absolutely delightful FLYING SHARKS... 50 foot mechanical rob=toic snakes... strange and fun robots that shoot pingpong balls at mal=cious speed, etc. I think you would enjoy this thing... to be held in the Moscone Center on April 25... ... but just seein= what I'm putting together will make you laugh.

Dan
