**Subject:** What Laminine does  
**Attachments:** pastedGraphic.pdf; Untitled attachment 00446.htm

I thought this a good definition of what Laminine does and how it works in case you or someone you know, are wondering.

What can Laminine do for you? Because everyone is different, we can't predict. What we do know is that Laminine unleashes a powerful repair mechanism in the body, allowing us to adjust our body's terrain and tissue integrity, and this turns on the body's self-healing. What could happen if you could speed up your body's natural healing processes?

Regeneration can occur in every cell, which can help many people with symptoms like: arthritis, macular degeneration, clogged arteries, osteoporosis, hormone imbalance, adrenal fatigue, blood sugar challenges, and many disease processes!

Laminine contains 22 amino acids, and offers embryonic FGF, a peptide, or protein, that is the main architect for new life.

Laminine demonstrates a wide range of benefits that have been shown to lower cortisol (stress hormone) up to 50%, and promote repair of the body: hormones, central nervous system, and immune system. When you repair the brain, you can repair the body!
