Dear Jeffrey,

I'm taking advantage of the lull in conversation to send you the paper that I mentioned: take a look at the figure, which explains visually how Einstein's equations arise out of ticks of a clock. Looking forward to talking soon.

could we set aside 30 minutes so that you can bring me up to date on your work, phone weekend - next week? ,,  
question , If time behaved more like a field or force , than merely a metric, . causing an acceleration of space/ .if i had  
a one dimensional space with two distant objects, applying a force in the second dimension would draw the two objects  
together. it would look like gravity in the one dimension. same for two/ maybe for three.??? what would the math  
look like ?
