my advise is get this done asap with JE approval ( got kinda one go from =ou in front of B Goodman ) but if you could turn this into a =ormal OK

I think this will be the go to =uys for your 71st property for years to =ome

once its working we can look for a =better marantz" bet I think the key here Jeffrey is when i was working =ith this tek he pointed out what a good combo the marantz and sunfire =as with your lucas Doby system

so I =hink you should go for it ..... I spent hours with the owner this =ill lead to good things

your call let us =now

thx

scott

sorry for the =ypos

Morning Scott,

Here is a revised =nvoice

Technical opinion :

Existing setup has multiple issues :

- 1) Electrical circuit needs to be inspected, given the fact 2 AVRs blew within couple of month, there might be some strange spikes or shorts in the electrical feed  
Existing Monster Cable power conditioners are not surge protectors and will not protect the equipment in case of electrical spikes - I recommend to replace it with new generation of surge protectors from Surgex  
<http://www.surgex.com/pdf/residential/XR115-Brochure-EMAIL.pdf>
- 2) Crestron - this system is not very stable and requires frequent maintenance  
RTI control is user friendly with very solid performance at half a cost  
This is latest, just introduced, product  
[http://www.rticorp.com/files/cutsheet\\_t2x.pdf](http://www.rticorp.com/files/cutsheet_t2x.pdf)
- 3) Shutters and lights </span>  
Shutters control is very simple = contact closure control, we can implement easily  
Lights - I could not find a Main repeater ( the brain ) of the system, we need to determine what system is used -  
=utron Radio Ra 1st generation or Radio Ra2  
Difference is in the drivers ( =lder drivers might not work with new control system )
- 4) BluRay - this system deserves better BluRay - existing entry level Sony will not output best possible HD  
=icture, we suggest to get oppo BluRay - one of the best BluRay manufacture ever.  
<http://www.oppodigital.com/blu-ray-bdp-103/>

We are very concerned about the =VRs blowing up.

It might also be caused by short =n speaker wiring

Since we will not be able =o replace them, we will not take responsibility for the recurring AVR =ssues

Let me know if you have any question

Thank You

Radek Nesnidal
