To: =/b>Richard Kahn < ████████████████ >

Basically the process is:

1. Start the OLD machine holding =own T until the dancing Thunderbolt or Firewire logos appear. =/span>

2a. If the OLD machine has a =hunderbolt port (HAS to have the lightening bolt icon above) then use =he =/span>Thunderbolt cable to link the two machines.

- or -

2b. =/span>If the OLD machine does not have a Thunderbolt port, then plug =ne end of the FireWire cable into the old machine, and =he other into the FireWire to Thunderbolt adapter, and the =hunderbolt end into the new machine.

(Both cable =olutions arrived earlier.)

3. Run setup, when asked to migrate =xisting data, choose from another disk, and select ONLY =he =/span>home folder from the Documents & Data section. UNCHECK =LL OTHER OPTIONS (Applications, Computer Settings, Other files =amp; folders, etc.)

4. When prompted to log into iCloud use the AppleID that we use =Tunes / AppleTV:
jeeitunes@gmail.com | Jenjen12

5. Once the migration completes, =og into the new machine with the old machine's account =redentials.

6. Install:

Microsoft Office 2011:
=/span>https://www.dropbox.com/s/xvnafvjm4sx1sig/Office%202011%20%2814=3.9%29.pkg?dl=0
=/span>Adobe Flash =layer: http://get.adobe.com/flashplayer
Firefox: =/span>https://download.mozilla.org/?product=firefox-34.0.5-SSL&=s=osx&lang=en-US
Chrome: =/span>https://dl.google.com/chrome/mac/stable/GGRO/googlechrome.dmg</=>
=/span>Skype: http://www.skype.com/en/download-skype/skype-for-mac/downloadin=/
=/span>Spotify: http://download.spotify.com/Spotify.dmg
VLC: http://get.videolan.org/vlc/2.1.5/macosx/vlc-2.1.5.dmg

7. Run all software updates (Open =ord and choose Help > Check for Updates and in the Mac =ppStore choose the Updates =ab).

8. Once you've confirmed the data is on the new machine =nd working, we can erase the old machine by =pening /Applications/Utilities/Disk Utility.app.

=/span>Select the icon for =he old volume underneath the icon that should say "Target Disk =ode" (I'm assuming
the =omputer is still attached via Target Disk Mode — if not, =epeat steps 1 & 2 above) and click =rase. Select Security Options and click =he first tick mark on the left to overwrite the drive with a =ingle pass of zeros (this may take a couple =ours).

Once it completes, eject the old drive and shut the machine =own. It's now ready to be disposed of =afely (the next person will have =o reinstall the operating system).
