BTW, I've been carrying a prototype around and have shown it to =arious people and it's the best experience any of them have =een. Jeffrey, we've got to show you. It looks simple, but the =ield of view and the simplicity is really important. It's much =etter than the high end systems and sort of shows how important math is = basically great lens design are more important than just about =nything else. ;-)

>
> This is a nice little box. It uses the Oculus optics and some of the =PIs developed by them. Field of view is about 90-110 degrees but the =esolution is very nice. It is tied to the one Samsung device (a very =ice phone). The first units that will be coming out are developer =nits, though they should be available to anyone that wants to purchase =t.
>
> Of course our field of view is much larger and we will work with any 7 =r 8 inch tablet for the first device. We are beginning to look at what =t would take to support phones as well - a higher power lens will give =s the same field of view we have now but work with a 5 inch phone. We =lso think we can do this with a single lens/eye which will simplify the =esign and lower the cost.
