**Subject:** FYI: Projector Status

Good day Boss,

The projector status is as follows:

- The new bulbs are in and both are working (only one was running all this time) for brighter picture.
- The controls are responding again (both the projector remote and the manual)
- Focus improved
- The vent snorkel was removed (stopping the heat from blowing back into the unit).
- The power connection is still an issue - Dave got it to power up fully to show an image but it shuts down after 10 - 15 minutes.

Dave states that it has a lot of life in it still once we get the terminals clean of the corrosion. He is also creating a list of items that will help with the maintenance of the projector and reduce the noise level.

Regards

Jruan
